

BASEarchive™ houses all your historical data for as long as you deem necessary and is the only healthcare safety deposit box that you will need.

BASEarchive™ is implemented after converting to new system to retain access to historical data. This tool is a cost-effective solution that allows you to manage and work down your AR.

BASEarchive™ is the foundation for archiving your patient accounting, clinical, payroll, and general accounting. This tool is easily accessible, user friendly, and enables you to link data from disparate systems.

BASEarchive™ is used to satisfy legal, audit, release of information, reporting, and research data in addition to your AR needs. You can analyze any facet of your data more precisely and to the level of detail you need. The application replicates legacy system structures and in turn, makes the processes more efficient.

- Efficient
 - Search for any data within a facility or across an enterprise.
 - See demographics, status, and balance “at a glance” on a single screen.
 - View all names used and nearest relative/emergency contacts.
 - Update and upload patient data seamlessly.

- Effective
 - Ability to ingest multiple applications and tailor data access via robust security matrix capabilities to your needs.
 - Direct work efforts according to your priorities and staff levels.
 - Store historical 835s for viewing and auditing capabilities.
 - Post and store current inbound 835s.
 - Store historical 837s in paper claim format for viewing.
 - Create claim shell 837s for sending to a claim scrubber system.
 - Allows other vendor integration without having to change format.

- Flexible
 - Ability to flex features and functionality based on current needs.
 - Ability to include/exclude data based on immediate needs.
 - Simple for end users to generate reports on any frequency required.
 - Modify and change views any way you desire easily.
