

BASEarchive™ allows you to house your historical data for as long as you deem necessary. **BASEarchive™** is your healthcare guiding light.

Scope - sentence under purpose like on revenue

BASEarchive™ is your cost-effective solution to house historical data. It will allow you to work down your AR without having to convert systems or change vendors.

BASEarchive™ is used in conjunction with major hospital software systems (i.e., Cerner, Epic, and Meditech). This tool is easily accessible and user friendly.

- **Flexibility and efficiency**

- The BASEarchive tool allows the ability to search by multiple points of patient data. The patient information is “at a glance” meaning you can see patient demographics, status and balance without searching through multiple screens
- Alias/other names used and nearest rel/emergency contact information available. Other contact information available if applicable
- Ability to update Date of Death, vendors, etc

- **Organizing and prioritizing**

- Access is determined by the client and can be individualized or based on department
- Allows the client the ability to assess their current needs and address accordingly. These are then prioritized by the client management team.

- **Reporting**

- Our tool has the ability to run reports based on client needs. The queues and reports will have ability to have certain data added or removed based on the client's specific needs.
